

Setting up and Running Jupyter Notebook

This is a short note for using Jupyter Notebook on the School's cloud-based jupyterhub server in this module. As we have already used the server in the AI I module, this is a simple process.

Step 1. Accessing the School's cloud-based jupyterhub server to work online

In your browser, use the following link to log on the server:

<https://csctcloud.uwe.ac.uk:22000>

Once you logged in, you are in the jupyterhub Home directory. Click New on the top right corner and select the Folder option to create a new folder, called ML_Module. All your Jupyter Notebooks for the module should be in this folder.

It would be a good idea that you also create a local folder, called ML_Module, on your own machine or somewhere else so you can keep all the learning materials for the module in that folder. For example, you can create a directory structure that mirrors the structure we have on the module site on the Blackboard.

Now download the two Jupyter Notebooks in Practical 1 on the Blackboard onto your own local machine.

Step 2. Uploading and opening a notebook

Get back to the jupyterhub Home directory. Once the ML_Module folder is created and listed, click on it to get into the folder. Click on Upload on the top right corner, upload a Notebook for Practical 1, e.g., intro-to-libraries.ipynb, into the folder.

Once uploaded and listed in the folder, click on it to open.

Step 3. Required Python modules

All the Python modules you need have been installed for you in a "virtual environment" called Machine Learning. All you need to do is to make sure that the notebooks are working with that as the 'kernel'. Click on Kernel on the top menu bar, followed by Change kernel, then select Machine Learning.

You are now ready to run your first Jupyter notebook for this module.

There are two Notebooks for Practical 1, linear-regression-gradient-decent-sklearn.ipynb is your primary worksheet for this practical so you can focus on that. intro-to-libraries.ipynb can be used as a reference only rather than part of any practical worksheet - the appropriate methods are introduced when they are used in worksheets.

Step 4. Start working on a Notebook for Practical 1
